Education

Master in Machine Learning, Data Science and Artificial Intelligence at Aalto University

GPA: 4.5

Expected year of graduation: 2027

Bachelor in Data Science at Aalto University

GPA: 4.72

Year of graduation: 2025

Standard SAT

English: 790

Mathematics: 790

About me

Driven Data Science student at Aalto University, specializing in Machine Learning and AI, eager to transform player data into actionable insights for impactful game experiences.

Skilled in Python and SQL, ready to automate data workflows and craft insightful analyses that support strategic decision-making in a fast-paced gaming environment.

Hard skills

- Python, SQL, C, C#, R, Matlab
- Data Analytics
- Data visualization with PowerBI
- Statistical models and machine learning
- 4 years experience with game development

Soft skills

- Team work
- Taking initiative and responsibility
- Problem solving
- Communications

Experiences

Work experience

Solo Game Developer

Freelance: <https://fetss.itch.io/>

2019 - 2022

- I started coding games due to my passion for game development. I learned patience, problem solving skills and team work through group projects.
- 3 of my games have been published on a major content platform.

Game Developer at Dyscordion Entertainment

2021 - 2023

- I worked at Dyscordion Entertainment as a freelance developer.
- I worked on UI and core systems on their projects.

Freelance Game Development at HypeHype

2023 - now

- After a 3 month period of internship, I was given the opportunity to work with a small team, developing games on HypeHype's platform using their tools.
- I learned to coordinate and teamwork in a professional environment.

Projects

Economic Forecasting With Machine Learning Models:

- Finnish regional economic indicators were predicted using a variety of statistical models. The research project was done in collaboration with the OP Group as part of the Aalto University's Data Science Project course.

Student Stress Factors

- Multivariate analysis was done in order to determine the relationship between Engineering student's level of stress and various life style and social factors using Multiple Correspondence Analysis.

Dried Beans Classification Using Machine Learning

- Machine learning classification methods have been trained on a dataset of dried bean data in order to determine which species a dried bean is given its physical characteristics.

Experiences

Volunteering experience

Helsinki Coffee Festival

25-27/4/2025

- Volunteered to help at the cup sale desk, guided recycling, and entry checks during the event.

Junction 2024

10-12/11/2024

- Volunteered as a staff at the information desk. My role in the event was to greet people coming in and solve people's problems and answer their questions.

Junction 2023

10-12/11/2023

- Volunteered as a staff at the information desk. My role in the event was to greet people coming in and solve people's problems and answer their questions.

Pocket Gamer Connect Helsinki 2025

7-8/10/2025

- Volunteered to help with the registration desk during the 2 day event.

SPLASH! 2025

20/9/2025

- Helped organizing the new event, and manning the registration desk.
